

- Access the web application here : https://manohargolleru.github.io/Perception_Pilot/
1. You will be asked to give permission for microphone access from the browser - Press Allow

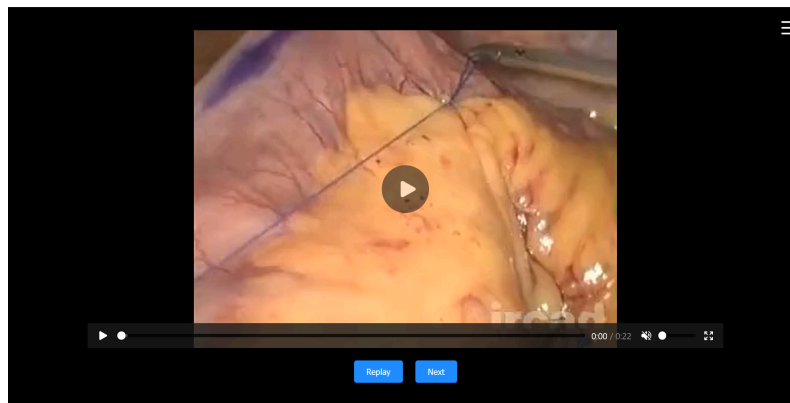

2. Test if the Application has proper access to the microphone and is working by clicking the hamburger menu on the top-right.

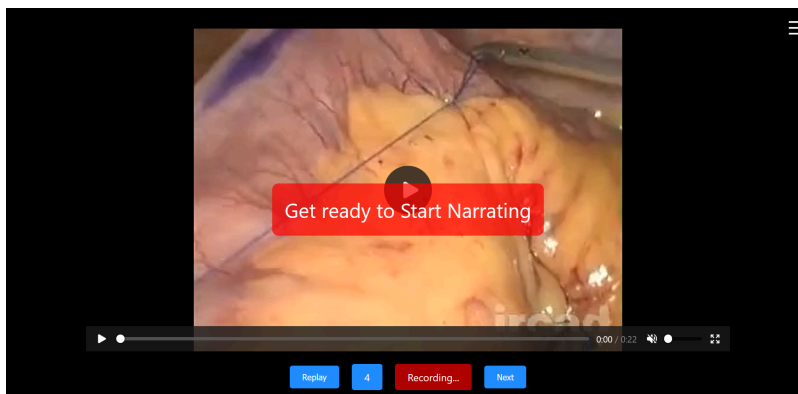

You can just press start recording and speak, press the stop recording button when finished and click the play icon to listen

3. After checking the functionality of the microphone, fill out the details on the web page then press start session. You will be taken into full screen and the first video will be displayed along with Replay and Next buttons at the bottom.

4. Now just press the play button or the middle of the video to play the video. Once you are done watching, click on the replay button and you will see some pop ups asking you get ready for narrating the video. When the count down at the button disappears the video will start playing and you can narrate accordingly.

Once the video is ended the recording will stop, you will have to click the next button to go to the next video.

Same process:

- Click play
- Watch the video
- Click replay
- Narrate after countdown ends
- Click next for the next video

Once all the videos are completed a zip file with the wav files will be downloaded and also a csv to your computer.
